Wizard Accounting Solutions simplifies, takes guesswork out of Microsoft Dynamics setup and purchase

*Now available to end-users, unique turn-key system provides
economical, reliable rampups*

Vienna, VA, June 13, 2007 - Wizard Productivity Systems, LP (WPS) today released its Wizard Accounting Solutions for Microsoft Dynamics™, a unique system that empowers end-users to easily purchase, install, and learn Microsoft Dynamics™.

Its setup component, the Wizard X4 Productivity Suite™, has been used for a year by Microsoft Partners across the country to facilitate client implementations. The turnkey end-user package, purchased easily online for any number of users (at www.wizardx4.com), offers three options depending on desired level of training and implementation assistance, all needed hardware and software, and access to financing.

“With just the click of a mouse or one phone call, companies are now empowered to get everything they need to implement Microsoft Dynamics for any number of users, across any number of locations,” says WPS President Paul Farrell. “It’s an excellent fail-safe choice for time or budget-sensitive situations, and gives end-users comfort and assurance that they can get up to speed on their implementation without worrying about snafus.”

Wizard Accounting Solutions gives end-users the ability to configure, automate, document and troubleshoot setups. Notes Farrell, “Any end-user—working in tandem with a Microsoft Partner or independently—can proceed methodically and predictably. It takes the guesswork out of the process and enables anyone to step in and efficiently learn Microsoft Dynamics. In that sense, it’s a replicable, almost ISO type of standard for Microsoft Dynamics setups.

“Lack of a predictable, economical methodology for these implementations has plagued both end-users and the Microsoft Partners trying to get their clients up and running,” adds Farrell, whose company is a Microsoft Gold Certified Partner.

End-users can save 30-50% over the cost of more time-and-labor-intensive implementations. It guides the user through proper sequences for entering critical setup and configuration information, minimizes manual entry time, and enables easy uploading of large data files.

Wizard Accounting Solutions also anticipates on behalf of, and makes recommendations to, those configuring the system—as well as alerting people to threats and quickly catching any developing problems.

Wizard Accounting Solutions includes five elements:

1. Microsoft Dynamics, the cost-effective solution to manage and integrate finances, e-commerce, supply chain, manufacturing, project accounting, field service, customer relationships and human resources;
2. Wizard X4 Productivity Suite, featuring an intuitive, step-by-step Q/A program to configure the system, provide examples and recommendations, and crosscheck configuration logic;
3. Wizard Customized Dynamics Server (WCDS), customized to work with Microsoft Dynamics, includes a three-year, 24/7 service plan featuring guaranteed next business day service and offsite backup, (shipped directly and ready to plug in, eliminating the need to evaluate and upgrade the existing IT environment);
4. Choice of three solution levels to provide the desired level of technical guidance and coaching (all include customer support to get up and running)—Foundation (implementation plan, discussion about and assistance with structuring such items as chart of accounts in Microsoft Dynamics, software/server configuration), Select (Foundation plus progress monitoring, training, and material delivery via web conference calls), Premier (Select plus creation of Balance Sheet and Income Statement, assistance in converting master record data from chart of accounts, vendors and customers); and
5. Opportunity to apply for Microsoft Financing that funds 100% of eligible Microsoft third-party software, partner services and hardware costs. WPS also accepts credit cards.

Chris Conway, principal of Washington, D.C.-based Evolutionary Business Solutions, Inc., a management consulting firm, says the Wizard X4 setup system “gives both consultants and clients an efficient way to configure Microsoft Dynamics systems. This gives the client confidence in the process,” and therefore confidence in the setup partner.”

Karen Crawford, Accounting Manager with Model Die & Mold, Inc., a Grand Rapids, MI-based manufacturer of high quality molds and specialty dies, points out that the system, “saved us hours in implementation costs and reduced the total cost by roughly 30%.”

Kreg Decker, president of Edmond, OK-based New Vision Consulting Group, Inc., adds, “It’s amazing how Wizard X4 has incorporated all the setup issues and decisions.”
